

Anti-HA tag Monoclonal Antibody

Source: Anti-HA tag mAb is a mouse monoclonal antibody raised against a synthetic peptide from influenza hemagglutinin epitope (YPYDVPDYA) coupled to KLH.

Clone: HA.C5

Immunofluorescence staining of HA-tag fusion protein (transcription factor) in a stable expressing cell line (B) and control cell line (A).

HA Western Blot analysis of 293 cells transfected with HA-tagged vector (2) and untransfected control (1).

Specificity: HA-tag monoclonal antibody recognizes HA-tagged tagged proteins over-expressed in cells, including either amino- or carboxy-termini of targeted proteins in transfected mammalian cells.

Formulation: Each vial contains 100µg IgG3 in 1mg/ml in PBS, pH 7.4 with 0.05% sodium azide and 50% glycerol. Frozen liquid.

Storage/Stability: Stable for one year at -20°C from date of shipment. For maximum recovery of product, centrifuge the original vial after thawing and prior to removing the cap. Aliquot to avoid repeated freezing and thawing. Aliquot will be stable at 4°C for 3 months.

Applications: Western Blot (1:1000), Immunoprecipitation and Immunostaining (1:200).

Research Use: For research use only, not for use in diagnostic procedures.
